

COMPANY / 01

Company & Manufacturing Overview

Bamboo and wood materials, developed for real production programs.

HTR BAMBOO / SINCE 2009

From specification to packed shipment.

HTR Bamboo works with importers, distributors, furniture makers and interior-material buyers on bamboo panels, bamboo veneer and engineered wood veneer.

BASE

Huizhou, China

PRODUCTION

Anhui joint-venture
factory and qualified
partners

FOCUS

Export-oriented B2B
supply

MATERIAL PORTFOLIO

Three material families. One practical workflow.

01

Bamboo plywood & panels

Solid laminated bamboo panels from thin sheets to heavy sections, specified by construction, grain, colour and end use.

02

Bamboo veneer

Natural, carbonized, zebra and strand patterns with fleece, paper or no backing.

03

Engineered wood veneer

Repeatable colour and grain programs for furniture, doors, panels and interior surfaces.

WORKING METHOD

A clear path from enquiry to shipment.

The fastest quotations start with a complete application brief. Samples and documentation are matched to the actual product configuration—not treated as blanket claims.

01	Define	Material, size, thickness, surface, quantity, use and destination.
02	Confirm	Construction, tolerances, adhesive system, sample plan and order requirements.
03	Produce	Material preparation, lay-up, pressing, conditioning, sanding and inspection.
04	Pack	Export packing, marks, documents and loading plan confirmed for the shipment.

PRODUCTION

Material knowledge, not just a product list.

Bamboo behaves differently from conventional timber. Construction direction, moisture, pressing and finishing all influence the result.

Specification review

We check whether the requested dimensions, grain direction and surface are suited to the intended fabrication.

Sample alignment

Reference samples help define colour, structure and acceptance expectations before a production order.

Order traceability

Product and packing details are confirmed against the commercial order and shipment requirements.

QUALITY & DOCUMENTATION

Evidence tied to the product you buy.

Requirements differ by construction and destination. HTR Bamboo confirms the applicable documentation during quotation and order review.

01 FSC scope Eligible plywood products can be supplied with FSC documentation, subject to certificate scope and order confirmation.	02 Adhesive & panel testing Third-party reports are available for tested adhesive and panel configurations. Results apply only to the tested samples.
03 Order controls Dimensions, tolerances, moisture, surface, packing and marking are agreed for the specific order.	04 Destination requirements Tell us the market and intended use early so current documentation needs can be checked before production.

Certification, test evidence and regulatory suitability are not inferred across unrelated products or configurations.

APPLICATIONS

Designed to enter a production line.

Our materials are supplied for further processing. Machining, bonding, finishing and final-use validation remain part of the buyer's manufacturing program.

EXPORT DELIVERY

Packing is part of the specification.

Panel protection, pallet dimensions, labels and loading method are confirmed against the route and handling plan.

- Export-ready pallet and protective packing options
- Order marks and documentation confirmed before dispatch
- Mixed specifications reviewed for safe, practical loading
- Photos and shipment details available as agreed

START A CONVERSATION

Send the brief. We will shape the material plan.

For a useful first reply, include the material, dimensions, thickness, quantity, application, destination and any documentation requirement.
